

New Strobo Kit

The Strobo is a compact and simple to use creative light modifying system for battery operated flashguns. The Strobo comes as a kit and is available in two versions, one which fits directly onto a flashgun and the other which includes the highly successful Ezybox Hotshoe Plate.

The honeycombs and gels/masks can be used individually or in combination by simply layering them on top of each other using the built in magnetic connectors. Optional Barn Doors are also available for both kits.
